Setting Release Conditions

- In this tutorial you will learn how to set release conditions
- Release conditions allow you to restrict the release of course materials based on factors other than dates and times
- D2L allows you to set Release Conditions for most of the course materials and tools
- For this example, we will be demonstrating how to set a Release Condition on a Dropbox folder

When you edit the properties of the Dropbox Folder you should see the Restrictions tab

And then the Release Conditions section

When you select Create and Attach a new window will display
- Select the Condition type from the drop down menu
Setting Release Conditions

- Notice that D2L provides you with a multitude of options for the Release Condition.
- We are going to use Checklist completion.
- Next we are going to select the Assignment 01 checklist and then the Create button.
- Finally we need to choose between All conditions and Any condition.
- All conditions means that the student needs to satisfy all of the Release Conditions before the Dropbox will become visible and Any condition means that the student only needs to satisfy any one of the listed conditions.
- In this case we can leave the default value of All conditions must be met.
- When we Save and Close the Dropbox, D2L will only allow students who have completed the Checklist for Assignment 01 to access the Dropbox folder for Assignment 01.
- The diamond, double-arrow icon lets us easily see that the dropbox folder has an active release condition.
